SCORES CARELESSHESS AT CONSTRUCTION PROJECTS

Construction projects in the Ploydiv region are suffering from serious shortcomings of engineering, technical, and warehouse personnel. Food stores on the Vasil Kolarov dam projects are in very bad condition, scattered all over the building area, and exposed to loss and spoilage. Housing space in barracks is not allocated according to regulations, but favors high-renking personnel. At the Bratsigovo plant construction project, build-ing material is carelessly stored and coment has been scattered on the ground. The same is true of the Septembrigohe plant construction project at Batak village, where badly stored building material was flooded by water and made useless. Many tons of coal for the brick kilns are lying among dirt and refuse in the yards, etc.

The director of the Vasil Kolarov dam project was severely reprimanded for careless handling of construction material under his care and warned that stronger measures will be taken against him if he does not take necessary action. The warehouseman was fined one fourth of his monthly salary. Similar fines were imposed on other delinquent personnel, some supervisors were dismissed, and all were severely and publicly reprimanded.

On the other hand, some personnel were praised for efficiency and econcmy. Engr Emil Popov of the automotive shops construction project and the personnel working on this enterprise were cited for the excellent performance of their duties and faultless storage of building material.
